

Apocalypse when

The End of the World. A History

STEVEN STROEYKENS

The apocalypse is as old as the world. People have always tried to imagine what might happen if everything collapsed. In the past, we fearfully observed the arrival of comets, or listened to the predictions of soothsayers. Nowadays, we fear terrorism, nuclear threats and climate change. Sometimes it looks like doomsaying is really back to stay.

Stroeykens, a physicist at heart, has thought of everything. The book's smooth and clear writing makes reading it a breeze. An absolute must-have book

KIJK MAGAZINE

Steven Stroeykens wonders whether we really should be afraid that the end of the world as we know it is approaching. Some modern predictions for the end of the world show striking similarities with age-old apocalyptic fears. The author investigates what science has to say on the subject. What might the end of the world really look like? Should we be worried about the climate, mutating viruses, artificial intelligence and asteroid impacts? Or is that fear just as irrational as that of the medieval cultists who constantly expected another biblical flood to wash away the world?

'The End of the World' is a fascinating history of catastrophes, fears and nightmares.

AUTHOR

Steven Stroeykens (b. 1967) is a writer and science journalist. He studied physics at the University of Leuven. From 1994 to 2014, he was a science journalist for De Standaard, and in 2010 the science editorial team was awarded SKEPP's 'Zesde Vijs' prize under his leadership. His book 'Found It! How the Higgs Boson Changed Our World' was published in 2013. He currently lectures science journalism at the University of Leuven. *Photo © Koen Broos*
